

WhatsApp Smart Search AI

Product Requirement Document (PRD)

1. Overview

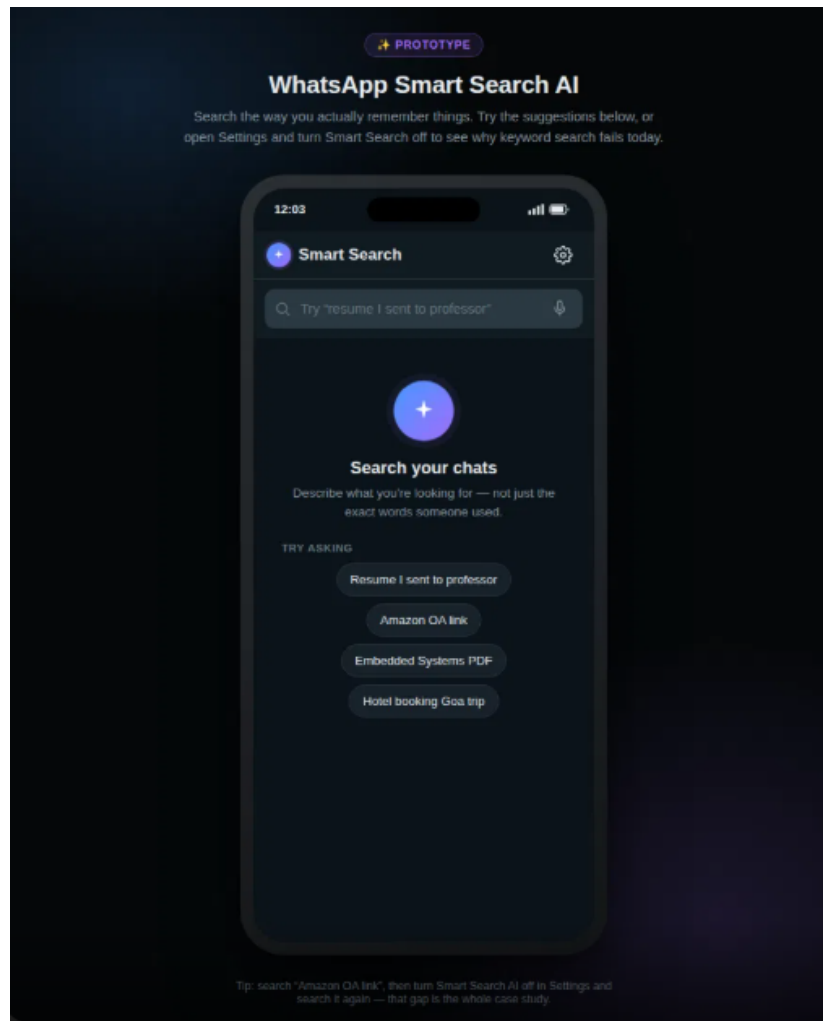

WhatsApp Smart Search AI introduces semantic search that understands user intent instead of relying on exact keywords.

Home Screen – AI Smart Search entry point

2. Problem Statement

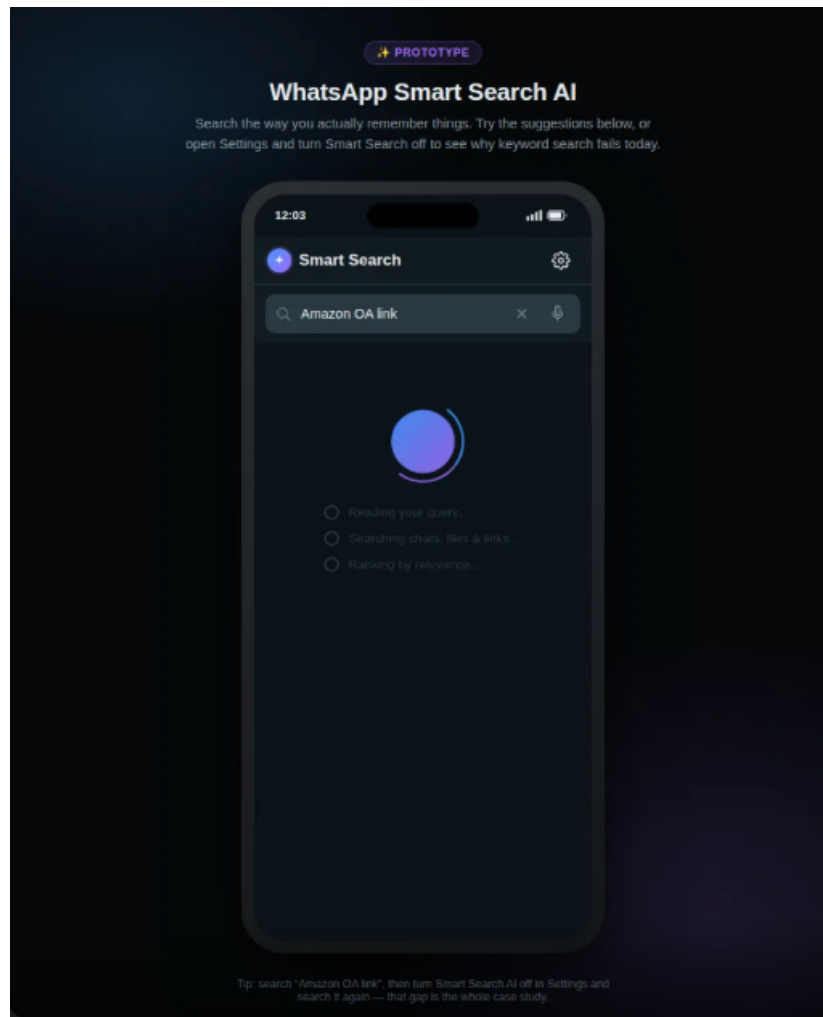

Users remember context such as who sent a file or why it was shared, but not filenames or exact text.

Dark Mode Home Screen

3. Goal

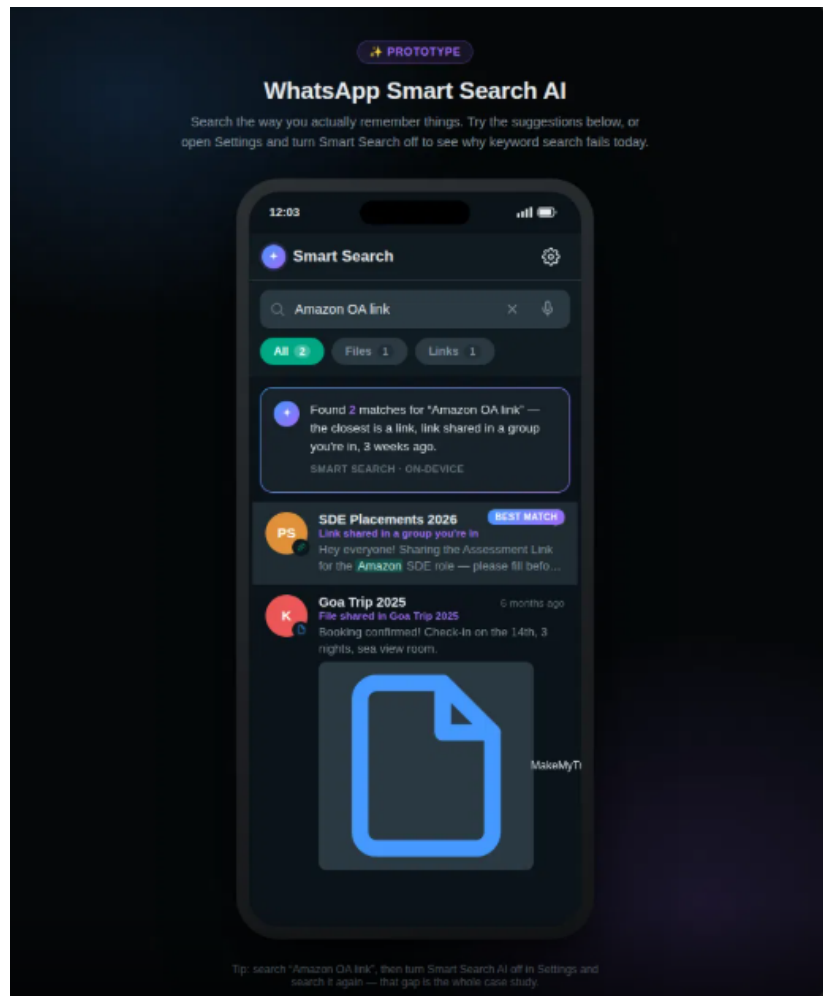

Enable users to find messages, documents and links using natural language.

AI Processing Experience

4. User Flow

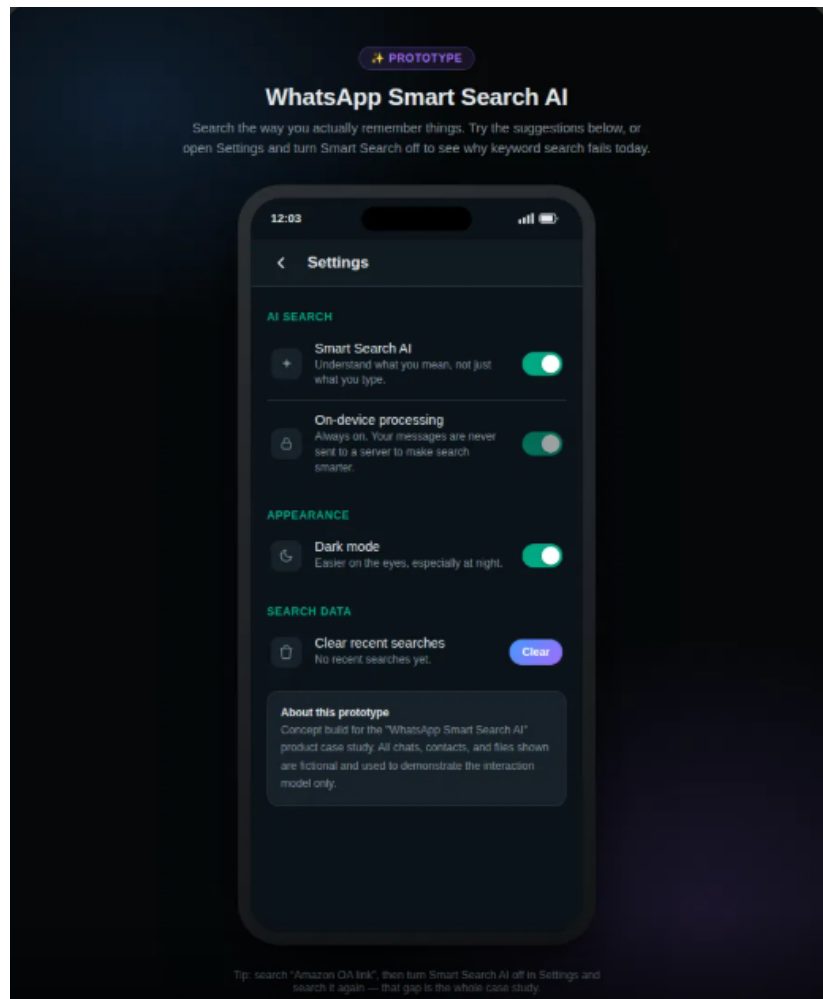

Open WhatsApp → AI Search → Natural Language Query → Semantic Search → Ranked Results
→ Open Result

Semantic Search Results

5. MVP Features

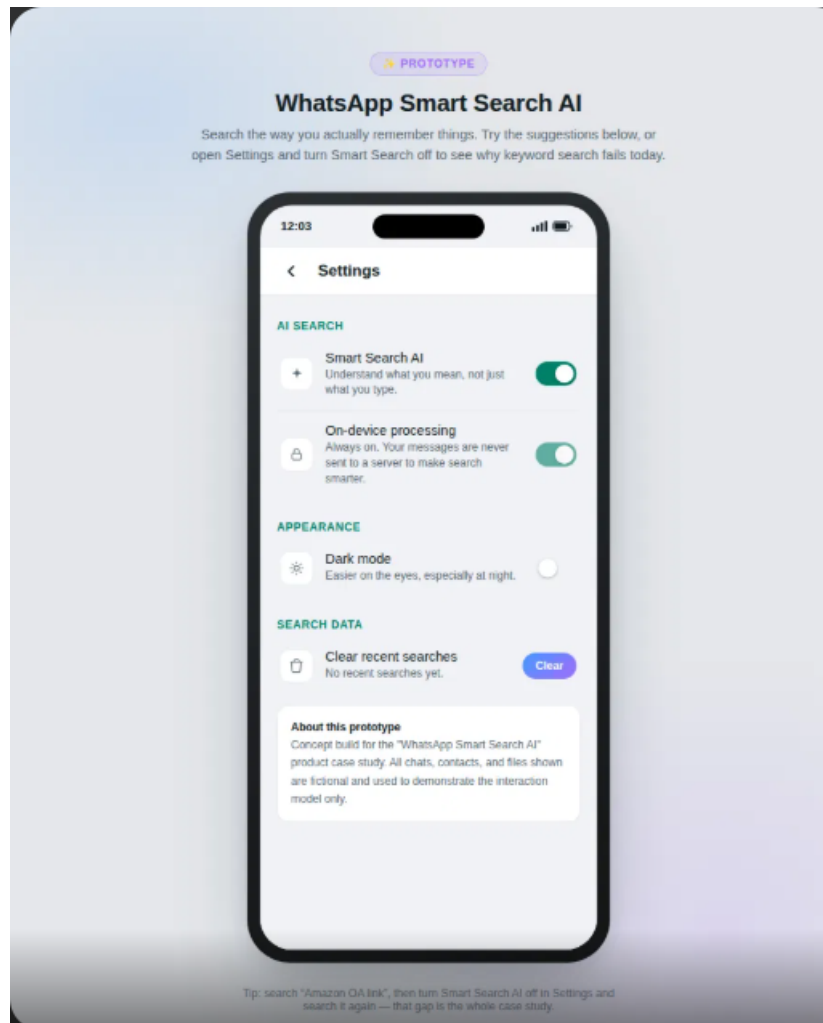

Natural language search, semantic ranking, AI summaries, smart filters, related documents and privacy-first on-device processing.

Settings – Dark Mode & Privacy

6. Success Metrics

North Star: Search Success Rate. Supporting metrics include Average Search Time, Repeat Usage, Successful Result Click Rate and Latency.

Settings – Light Mode

7. Future Scope

Voice search, OCR-based retrieval, multimodal search, image understanding, calendar integration and AI recommendations.
